

# WILD *for* BEES™

## INSTRUCTIONS: DIY BEE HOTEL

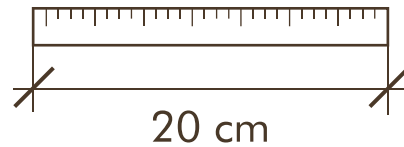

1

Gather hollow or pithy plant stems, or even old wood scraps, to build your bee hotel.

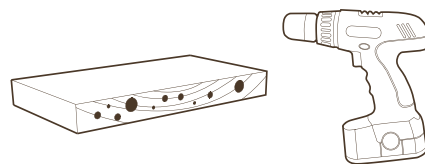

2

Make sure they're at least 20 cm in length!

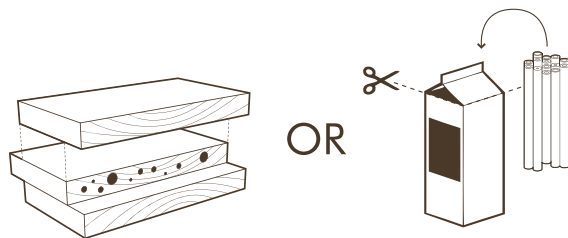

3

If you're using wood scraps, drill holes 20 cm deep, with an opening of no more than 1 cm

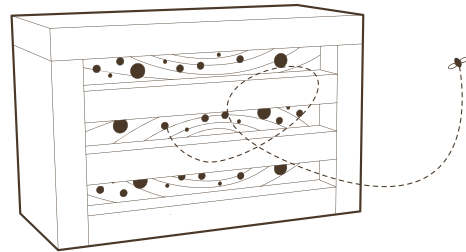

4

Stack wood slightly offset from one another, or gather nesting materials into a wood box (a milk carton works too!)

5

Place your new bee hotel off the ground to ward off animals (or children!). Enjoy!
