## GREENHOUSE COLLINGWOOD (18041) WATER SERVICE SUMMARY

## 1. FIRE WATER DEMAND

1. Fire water demand requirement is based on NFPA 13 - Standard for the Installation of Sprinkler Systems.
2. According to NFPA 13 , section 11.2.2, table 11.2.2.1 water supply requirements for pipe schedule sprinkler systems, for ordinary hazard classification, the fire protection water flow (including sprinkler system and standpipe system) is $\mathbf{8 5 0 G P M}(\mathbf{5 4 L} / \mathrm{S})$.

## 2. COLD WATER DEMAND

1. Cold water demand is spitted to two categories: domestic use and processing use.
2. Domestic water calculation is based on ASPE standard and OBC 7.6.3., also please refer to attached domestic water calculation sheet.
2.1. Based on proposed floor plan, total domestic water fixture unit is $\mathbf{1 3 6} \mathbf{~ F U}$.
2.2. For system with flush valve, based on ASPE standard, 136 FU domestic peak flow is 80GPM (5L/S).
2.3. Domestic average day volume is based on assumed 8 hours working hour daily usage in following table, converted to 22.95 gallons water per person per day. For 40 employees, average daily domestic water volume is estimated 920 gallons ( 3480 liters).

| Fixture | gpm or <br> gpf | min/occ or <br> number/occ | gallons/occ/day |
| :--- | :---: | :---: | :---: |
| Lavatory | 1.0 gpm | $2 \mathrm{~min} /$ day/occ | 2 |
| Water Closet | 1.6 gpf | $2 \mathrm{use} /$ day/occ | 3.2 |
| Wall Urinal | 1.25 gpf | $1 \mathrm{use} /$ day/occ | 1.25 |
| Kitchen Sink | 1.5 gpm | $0.5 \mathrm{~min} /$ day/occ | 0.75 |
| Shower | 2.0 gpm | $7.5 \mathrm{~min} /$ day/occ | 15 |
| Service Sink | 1.5 gpm | $0.5 \mathrm{~min} /$ day/occ | 0.75 |
| Total | - | - | $\mathbf{2 2 . 9 5}$ |

2.4. Maximum day domestic volume is assumed 20 percent more that is $\mathbf{1 1 0 0}$ gallons (4160 liters).
3. Process water calculation is based on experience average daily volume $\mathbf{8 0 0}$ gallons (3030 liters).
3.1. Assume processing volume 800 gallons is distributed during 4 working hours, convert to peak flow rate will be 3.4GPM ( $0.22 \mathrm{~L} / \mathrm{S}$ ) which is approximate $4 \mathbf{F U}$.
3.2. Maximum day processing volume is assumed 20 percent more consumption with 1 hose bib ( 6 gpm ) running 3 hours that is $\mathbf{1 9 6 0}$ gallons ( $\mathbf{7 4 2 0}$ liters).
4. Cold water total demand summary is:
4.1. Peak flow 83.4GPM (5.3L/S), 140 FU.
4.2. Daily average 1720 gallons ( 6510 liters).
4.3. Maximum day 3060 gallons ( 11580 liters).

## 3. SANITARY CALCULATION

1. Sanitary flow is spitted to two categories: domestic sanitary and processing sanitary.
2. Domestic sanitary calculation is based on ASPE standard and OBC 7.4., also please refer to attached domestic water calculation sheet.
2.1. Based on proposed floor plan, total domestic sanitary fixture unit is 90 FU.
2.2. Based on OBC 7.4.10.5, 90 FU peak flow is 50GPM (3.2L/S).
4.4. Domestic sanitary average day and maximum day volumes should match cold water volumes in section $2.3 \& 2.4$, that is average day domestic sanitary volume $\mathbf{9 2 0}$ gallons ( $\mathbf{3 4 8 0}$ liters). Maximum day domestic sanitary volume $\mathbf{1 1 0 0}$ gallons ( $\mathbf{4 1 6 0}$ liters).
3. Process water sanitary calculation is based on experience average daily volume to be $\mathbf{6 0 0}$ gallons ( $\mathbf{2 2 7 0}$ liters).
4.5. Maximum possible processing sanitary volume will be including 1 hose bib ( 6 gpm ) running for 3 hours discharge to sewer estimated total 2000 gallons ( $\mathbf{7 5 7 0}$ liters). Converted to peak flow 11GPM (0.7L/S) which is approximate 10 FU.
4. Total sanitary water summary is:
4.1. Peak flow 61GPM (3.9L/S), 100 FU.
4.2. Daily average 1520 gallons ( 5750 liters).
4.3. Maximum day 3100 gallons ( 11730 liters).

## SANITARY, DOMESTIC HOT \& COLD WATER DEMAND

| Fixture Type | F.U. PER FIXTURE/ UNIT |  |  |  | No. of Fixtures |  |  | TOTAL |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | SAN F.U. | Water F.U. | Hot Water F.U. | Cold <br> Water F.U. | 1st FI. | Mezz FI. | Total | SAN F.U. | Water F.U. | Hot Water F.U. | Cold <br> Water F.U. |
| Public |  |  |  |  |  |  |  |  |  |  |  |
| Lavatory (L) | 1.5 | 2 | 1.5 | 1.5 | 4 | 2 | 6 | 9 | 12 | 9 | 9 |
| Water Closet (WC-2) - Flush valve | 6 | 10 |  | 10 | 5 | 2 | 7 | 42 | 70 | 0 | 70 |
| Wall Urinal (U) - Flush valve | 4 | 5 |  | 5 | 2 |  | 2 | 8 | 10 | 0 | 10 |
| Kitchen Sink (KS) | 3 | 4 | 3 | 3 | 1 |  | 1 | 3 | 4 | 3 | 3 |
| Shower (SH) | 3 | 4 | 3 | 3 | 4 |  | 4 | 12 | 16 | 12 | 12 |
| Hose Bibb (HB) |  | 6 |  | 6 | 4 |  | 4 | 0 | 24 | 0 | 0 |
| Floor Drain | 4 |  |  |  | 4 |  | 4 | 16 | 0 | 0 | 0 |
| Total Fixture Unit |  |  |  |  |  |  |  | 90 | 136 | 24 | 104 |

Total Domestic Water FU: 136 FU, 80 GPM Peak Flow
Total Domestic San FU: 90 FU, 50GPM Peak Flow
